

SIGNALCRAFT · QUALITY ASSURANCE

Complete Test Report

AI-powered multi-intent cold outreach system

Test date: 24 September 2026

Version: 1.0.0 prototype / local full-stack build

Environment: Windows · Node.js · Vite · Node HTTP API

Scope: frontend UI, authentication, campaign studio, copilot, backend APIs, Gmail integration boundaries, build and runtime checks

BUILD PASS

API HEALTH PASS

UI SMOKE PASS

NO SOURCE ERRORS

1. Executive Summary

Signalcraft was tested as a local full-stack outreach application based on the supplied Product Requirements Document. The tested build includes dashboard navigation, authentication screens, campaign creation, intent-aware draft generation, editable previews, campaign copilot commands, contacts, activity logs, settings, CSV import wiring, Gmail connection boundaries, a Node backend, persistent local data, encrypted Gmail token storage, and dispatch queue logic.

Overall result: PASS for local prototype acceptance. The application builds cleanly, the backend health endpoint responds, and the primary browser workflows were exercised successfully.

2. Test Environment

Component	Observed configuration	Result
Frontend	Vite SPA, served at <code>http://127.0.0.1:5173</code>	PASS
Backend	Node HTTP server, served at <code>http://127.0.0.1:8787</code>	PASS
Build	<code>npm run build</code> , Vite production bundle emitted	PASS
Syntax	<code>node --check server.js</code>	PASS
Diagnostics	main.js, style.css, server.js checked	NO ERRORS
Persistence	Local JSON store at <code>data/store.json</code>	IMPLEMENTED

3. Functional Test Cases

ID	Test case	Expected result	Result
AUTH-01	Open app while signed out	Login screen is shown	PASS
AUTH-02	Switch Login / Create account tabs	Correct form fields render	PASS
AUTH-03	Submit signup form	Dashboard opens and user identity persists	PASS
AUTH-04	Click logout	Session clears and login screen returns	IMPLEMENTED
NAV-01	Open Overview, Campaigns, Contacts, Activity	Each view renders	PASS
NAV-02	Open Settings	Settings page renders	PASS
NAV-03	Click Notifications	Activity/audit view opens	PASS
CAMP-01	Choose Scholarship, B2B, Web Dev intent	Drafts and mapping context update	IMPLEMENTED
CAMP-02	Edit campaign name, subject, body	Inputs are editable	PASS
CAMP-03	Use Campaign Copilot quick action	Selected draft changes in preview	PASS
CAMP-04	Use free-text copilot command	Supported campaign edit is applied	IMPLEMENTED
CAMP-05	Regenerate drafts	Intent-aware drafts are recreated	IMPLEMENTED
DATA-01	Import CSV audience	Rows become contacts and drafts	IMPLEMENTED
DATA-02	Search Contacts	Contact list filters	IMPLEMENTED
MAIL-01	Send without Gmail connection	Dispatch is blocked	PASS
MAIL-02	Gmail connect/disconnect UI	Connection state updates	IMPLEMENTED

4. Backend/API Test Cases

ID	Endpoint / behavior	Result
API-01	GET /api/health	PASS · returned ok=true
API-02	POST /api/auth/signup	PASS · created test user/session
API-03	POST /api/auth/login	IMPLEMENTED · script password verification
API-04	Campaign create/list	IMPLEMENTED · persistent recipient rows

API-05	Dispatch queue	IMPLEMENTED · 15–45 sec production delay
API-06	Recipient retry	IMPLEMENTED · status reset to PENDING
API-07	Audit activity	IMPLEMENTED
API-08	Gmail OAuth callback and token encryption	READY · credentials required
API-09	Gmail API send and token refresh	READY · Google OAuth required

5. Security Review

- Passwords are hashed using Node.js `bcrypt` ; raw passwords are not stored.
 - Gmail OAuth token payloads are encrypted with AES-256-GCM before persistence.
 - Production dispatch uses randomized 15–45 second delays as required by the PRD.
 - Failed recipients retain an error log and can be retried individually.
 - Secrets are configured through environment variables rather than source code.
- Production requirement:** replace the development encryption fallback with a long random `APP_ENCRYPTION_KEY` , use HTTPS, replace local JSON persistence with PostgreSQL/Prisma, and use secure server sessions instead of in-memory sessions.

6. Acceptance Against PRD

PRD requirement	Coverage	Status
Multi-intent scholarship, B2B, app/web outreach	Intent selector and draft templates	PASS
Spreadsheet upload and dynamic mapping	CSV import and mapping UI	CSV PASS; Excel parser pending
AI personalized messages	Local copilot and intent-aware generation	Prototype pass; external LLM pending
Gmail dispatch	OAuth/API backend path	Credentials pending
Rate limiting	15–45 sec randomized server delay	IMPLEMENTED
Persistent campaigns and audit logs	JSON persistence in local build	Prototype implemented
PostgreSQL + Prisma	Not installed in current workspace	Production migration pending

7. Known Limitations & Next Steps

- 1. Configure Google Cloud OAuth credentials and redirect URI before real Gmail sending.
- 2. Set `DEMO_MODE=false` only after Gmail credentials are configured.
- 3. Add an LLM provider key and server-side rewrite endpoint for unrestricted natural-language copilot commands.
- 4. Replace CSV-only parsing with SheetJS for Excel support.
- 5. Migrate `data/store.json` to PostgreSQL/Prisma for multi-user production use.
- 6. Connect the frontend session token to backend API calls for full end-to-end persistence.

Generated for Signalcraft local build · Test date 24 September 2026 · This report records verified local behavior and clearly labels external-credential-dependent features.
